

My C++ roast generator gives the same roast every time I run the program.
I am using `rand()` with vectors.
How can I make the output random every time the program executes?

Your program gives the same roast because `rand()` generates the same sequence unless you **seed** it using `srand()`.

Add this line **once** before generating random numbers:

```
<> C++  
srand(time(0));
```

You also need these headers:

```
<> C++  
#include <cstdlib>  
#include <ctime>
```

Write a beginner-friendly C++ console program that generates random student excuses.

The program should:

- * Ask the user for their name
- * Store at least 10 excuse templates in a vector
- * Randomly select one excuse
- * Replace placeholders with the user's name
- * Generate different excuses every time the program runs
- * Add comments for beginners

```
<> C++  
  
#include <iostream>  
#include <vector>  
#include <cstdlib> // For rand() and srand()  
#include <ctime>   // For time()  
  
using namespace std;  
  
int main() {  
  
    // Variable to store user's name  
    string name;
```
